MALAIKA FATIMA

Computer Science Student | Aspiring AI & Game Development

auratech1101@gmail.com • Pakistan • github.com/auratech01 • linkedin.com/in/auratech01

PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience building multi-threaded Python applications and interactive HTML5 Canvas-based web games. Comfortable combining practical programming with modern AI tools such as the Google Gemini API and real-time system monitoring libraries. Seeking an internship or entry-level role in software development, applied AI, or game development to contribute, learn, and grow in the field.

EDUCATION

Bachelor of Science in Computer Science (BSCS) 2023 – Present
Virtual University of Pakistan
Currently in 7th Semester | CGPA: 3.72
Core Coursework: Object-Oriented Programming (C++), Database Management Systems (SQL), Web Systems & Technologies

TECHNICAL SKILLS

Programming Languages: Python, JavaScript (ES6+), C++, SQL, HTML5, CSS3
Web & Game Development: HTML5 Canvas (2D), Interactive Game Loops, 2D Physics & Collision Handling, Drag-and-Drop Mechanics, CSS 3D Transforms, DOM Manipulation, REST APIs
Frameworks & Libraries: psutil, pywebview, CustomTkinter, Tkinter, Google Gemini API, Multi-Threading (Python), SMTP/Email Automation
Tools & Platforms: VS Code, Git, GitHub Desktop, Cisco Packet Tracer, Linux (Ubuntu), Figma

FEATURED PROJECTS

Project Sentinel — Desktop Security Monitoring & AI Code-Auditing Application
Python, JavaScript (ES Modules), HTML5/CSS3, pywebview, psutil, Google Gemini API

- Built a multi-threaded Python security monitor with real-time detectors for firewall status, sustained CPU/RAM overload, suspicious outbound connections, failed logins and internet loss, each triggering a severity-based email alert.
- Designed a secure local architecture: token-authenticated REST API on localhost, PBKDF2 password hashing, persistent login lockout, view-only guest mode and OTP-based password recovery.
- Developed an offline pattern-based code scanner with optional Google Gemini API analysis, and a network port auditor that explains why each connection is flagged.
- Rebuilt the interface as a responsive HTML/CSS/JS glassmorphism dashboard with live ECG-style health graphs, and wrote 120+ automated unit tests.

Jade Lantern — Interactive Restaurant Web Experience
HTML5, CSS3, Vanilla JavaScript
Live Site: https://auratech01.github.io/jade-lantern-restaurant/

- Designed a fine-dining restaurant website with animated page sections and a custom 3D flip-book style interactive menu built using CSS 3D transforms.
- Implemented a dynamic, JavaScript-driven menu system with fully responsive layouts and no external UI frameworks.

Birthday Experience — Interactive 22-Level Web Game DESKTOP ONLY
HTML5 Canvas, JavaScript (ES6+), CSS3
Live Site: https://auratech01.github.io/birthday-experience/ (Desktop Only)

- Built a 22-level interactive escape-room-style web game (engineered exclusively for desktop displays) using vanilla JavaScript state management for level progression and screen transitions.
- Implemented custom canvas-based mechanics, including physics-driven drag-and-drop mini-games and real-time particle animations (fireworks, confetti).
- Deployed as a lightweight, dependency-free game directly to GitHub Pages.

INDEPENDENT PROJECT EXPERIENCE

Self-Directed Projects — Personal & Academic Work 2024 – Present

- Built responsive web applications, canvas-based rendering systems, and Python desktop tools independently and as part of academic coursework.
- Applied object-oriented programming principles in C++ and Python to build modular, maintainable code across multiple personal projects.

CERTIFICATIONS

- CCNA: Introduction to Networks (70 hrs) — Cisco Networking Academy, Jun 2025
- CPA: Programming Essentials in C++ — Cisco Networking Academy, Jun 2024
